PROFESSIONAL EXPERIENCE

Graduate Research Assistant 2021–present
Purdue University — Supervised by James C. Davis

- Conduct empirical analysis and mine software repositories to enhance pre-trained AI model reuse.
- Develop automated tools to improve transparency and security of open-source AI model supply chain.

Research Intern July – October, 2024
Socket — Supervised by Mikola Lysenko

- Designed data collection infrastructure for Hugging Face model package data and metadata migration to PostgreSQL database.
- Developed an LLM-based pickle malware scanner for PyPI and Hugging Face artifacts.
- Researched a novel typosquatting detection method using FastText and contrastive learning to generate embeddings, applying clustering algorithms to reduce overhead in identifying similar package names.

TensorFlow Model Developer 2021–2023
Purdue University × Google — Supervised by Abdullah Rashwan

- Led a team of 20+ undergraduate students in replicating state-of-the-art AI models, including object detection (YOLO family) and panoptic segmentation models (Maskformer family), in TensorFlow for Google's TensorFlow Model Garden Team. Managed tasks, component integration, and unit, differential, and end-to-end testing, achieving comparable performance to the original implementations.
